VALENTÍN SILVIO NOLASCO

Cybersecurity Analyst | SOC Analyst L1

valentin.nolasco123123@gmail.com | +54 9 2657 359495 | nolasko7.github.io | Villa Mercedes, Argentina

Professional Profile

Cybersecurity Analyst in training, holding the Google Cybersecurity Professional Certificate (Coursera) with hands-on grounding in system monitoring, log analysis, threat detection, and incident response. Currently building **blue team** skills through TryHackMe (SOC Level 1 path: Splunk, threat hunting, security monitoring). Strong background as a full-stack developer, bringing technical insight into architecture, networking, and secure cloud deployment.

Technical Skills

Information Security: SIEM | IDS | Log Analysis | Threat Detection & Mitigation | Incident Response | Vulnerability Assessment | Security Risk Management

Networking: TCP/IP | Network Protocols | Traffic Analysis | Perimeter Security

Systems & Scripting: Linux | SQL | Python (Security Automation)

Cloud & DevSecOps: Docker | Cloudflare | GitHub Actions | CI/CD

Blue Team Training: Splunk – hands-on (TryHackMe) | Threat Hunting | Security Monitoring | SOAR Concepts (Google Cybersecurity Cert.)

Certifications & Education

Google Cybersecurity Professional Certificate (v.2)

Google & Coursera — Completed, August 2026

- 8-course program: cybersecurity foundations, risk management, network security, Linux, SQL, and Python for security automation.
- Verifiable at: credly.com/go/rEaI6RrH

TryHackMe — SOC Level 1 Path

In progress

- Hands-on blue team training: Splunk, threat detection, security monitoring, and incident response.

B.S. in Systems Engineering

Universidad Nacional de Villa Mercedes

2025 – present | Admitted directly into 2nd year via transfer credit

Intermediate Degree: Systems Analyst

In progress – final exams pending, 2026

NASA Space Apps Challenge

International Hackathon — NASA/ESA, 2025

Certificate of participation; problem-solving under time pressure in an international team.

Technical Projects — Infrastructure & Applied Security

Citax — AI-Powered Appointment Scheduling SaaS

In Production

Next.js | Node.js | PostgreSQL | Docker | Cloudflare | GitHub Actions

- Designed and deployed the infrastructure using Docker and Cloudflare Tunnel, exposing services without opening public ports and reducing the production attack surface.
- Implemented a CI/CD pipeline with GitHub Actions for controlled, traceable deployments.
- Platform in production: 230+ appointments handled in its first two months of operation (116 avg./month), with 100% automation via WhatsApp API and no human intervention.

Mi Almacén — Inventory Management Mobile App

In Production

Flutter | Dart | MySQL | Android Studio

- Designed multi-device database synchronization with access control, ensuring data integrity in real-world retail operations.

Languages

Spanish: Native

English: Intermediate–Advanced *(technical reading, documentation, communication with international teams)*
