VALENTÍN SILVIO NOLASCO

Full Stack Developer | Product & AI Automation

valentin.nolasco123123@gmail.com | +54 9 2657 359495 | nolasko7.github.io | Villa Mercedes, Argentina

Professional Profile

Full Stack Developer with self-built products in production: multi-tenant SaaS, mobile apps, and LLM-driven automation running in real business workflows, not just prototypes. End-to-end experience – frontend, backend, database, cloud deployment, and CI/CD – with a focus on shipping products from design to real users. Google Cybersecurity Professional Certificate adds a security-first lens to architecture and deployment decisions.

Technical Skills

Frontend: React | Next.js | Tailwind CSS

Backend & APIs: Node.js | Express | REST APIs | WebSockets

Mobile: Flutter | Dart | Android Studio

Databases: PostgreSQL | MySQL | SQL

Cloud & DevOps: Docker | Cloudflare | GitHub Actions | CI/CD

AI / Automation: LLM Integration | WhatsApp API | Chatbots | NLP | AI Agents

Featured Projects

Citax — AI-Powered Appointment Scheduling SaaS

In Production

Next.js | Node.js | PostgreSQL | Docker | Cloudflare | GitHub Actions | WhatsApp API | LLM

- Designed a multi-tenant SaaS platform that lets each business configure multiple service providers and independent schedules, enabling new clients to be onboarded without code changes.
- Integrated an LLM via WhatsApp API to fully automate appointment scheduling – natural language understanding, availability checks, and booking confirmation – removing the need for dedicated administrative staff.
- Deployed the infrastructure with Docker and Cloudflare Tunnel, plus a CI/CD pipeline via GitHub Actions, enabling controlled, traceable deployments without exposing public ports.
- **Result:** 230+ appointments handled in its first two months of operation (116 avg./month), 100% without human intervention.

Mi Almacén — Inventory Management Mobile App

In Production

Flutter | Dart | MySQL | Android Studio

- Built an Android app with camera-based barcode scanning and multi-device database sync, enabling real-time operation across real retail businesses (convenience stores, kiosks, small markets).
- Built a sales module with cash-register closeout and profit analytics, giving owners visibility into best-selling products and margins without relying on an external system.

Sports Court Booking System — Web Application

React | Node.js | Express | PostgreSQL

- Digitized court booking and payments for real sports facilities, with a centralized dashboard for availability and payment tracking.

Certifications & Education

B.S. in Systems Engineering

Universidad Nacional de Villa Mercedes

2025 – present | Admitted directly into 2nd year via transfer credit

Intermediate Degree: Systems Analyst

In progress – final exams pending, 2026

Cybersecurity Professional Cert. – Google

Google & Coursera — Completed, August 2026

Verifiable at: credly.com/go/rEaI6RrH

NASA Space Apps Challenge

International Hackathon — NASA/ESA, 2025

Languages

Spanish: Native

English: Intermediate–Advanced *(technical reading, documentation, communication with international teams)*
